

Use Dashboard Nodes for Creating UI (Web Apps)

Team ID	PNT2022TMID08297
Project Name	Smart waste management system for metropolitan cities

Step 1: Open Node red and pick and place blocks according to python script flow

Step2: Make sure necessary blocks are installed in Node Red

Step 3: After creating the flow click on deploy

Step 4: Output is displayed in Node-red Debug window

Step 5: Also, web UI can also be seen by the URL followed by/ui

Screenshots: NODE – RED FLOW

The screenshot displays the Node-RED web interface with four parallel flows (Flow 1, Flow 1, Flow 1, Flow 4) running. Each flow consists of the following nodes:

- Flow 1 (top):** IBM IoT node → Distance 1 function node → msg.payload node → Distance 1 output node.
- Flow 1 (middle):** [get]/sensor node → function 1 node → http node.
- Flow 1 (bottom):** IBM IoT node → Distance 2 function node → msg.payload node → Distance 2 output node.
- Flow 4 (bottom):** [get]/sensor node → function 2 node → http node.

The debug console on the right shows the output of these flows, including distance and load data. The console output is as follows:

```
